**Content And  
Formatting Issues**

# Issues To Be Fixed ASAP

## Invalid SSL (HTTPS) certificate

- Your website was down for a few days
- People prefer to avoid unsecured sites
- SSL certificates must be auto-renewable

## Website has two domains

- Your website is accessible via two domains
- Both sites have different content and pages
- Google still shows the old domain

## Website is not SEO friendly

- Pages lack important SEO attributes
- Search engines don't know how to index them
- SEO content should be rewritten

## Website is not social media friendly

- The site has no formatting for social media
- People will not see eye-catching cards
- Examples for Facebook and LinkedIn are below

# Other Issues To Be Fixed

## Hosting is not properly configured

- Incorrect redirects from http to https
- Incorrect redirects from www to non-www
- Page loading speed is slow

## Content and formatting issues

- All content can be improved for customers
- Phone numbers are not clickable
- Social media accounts are not clickable

## Broken sitemap.xml

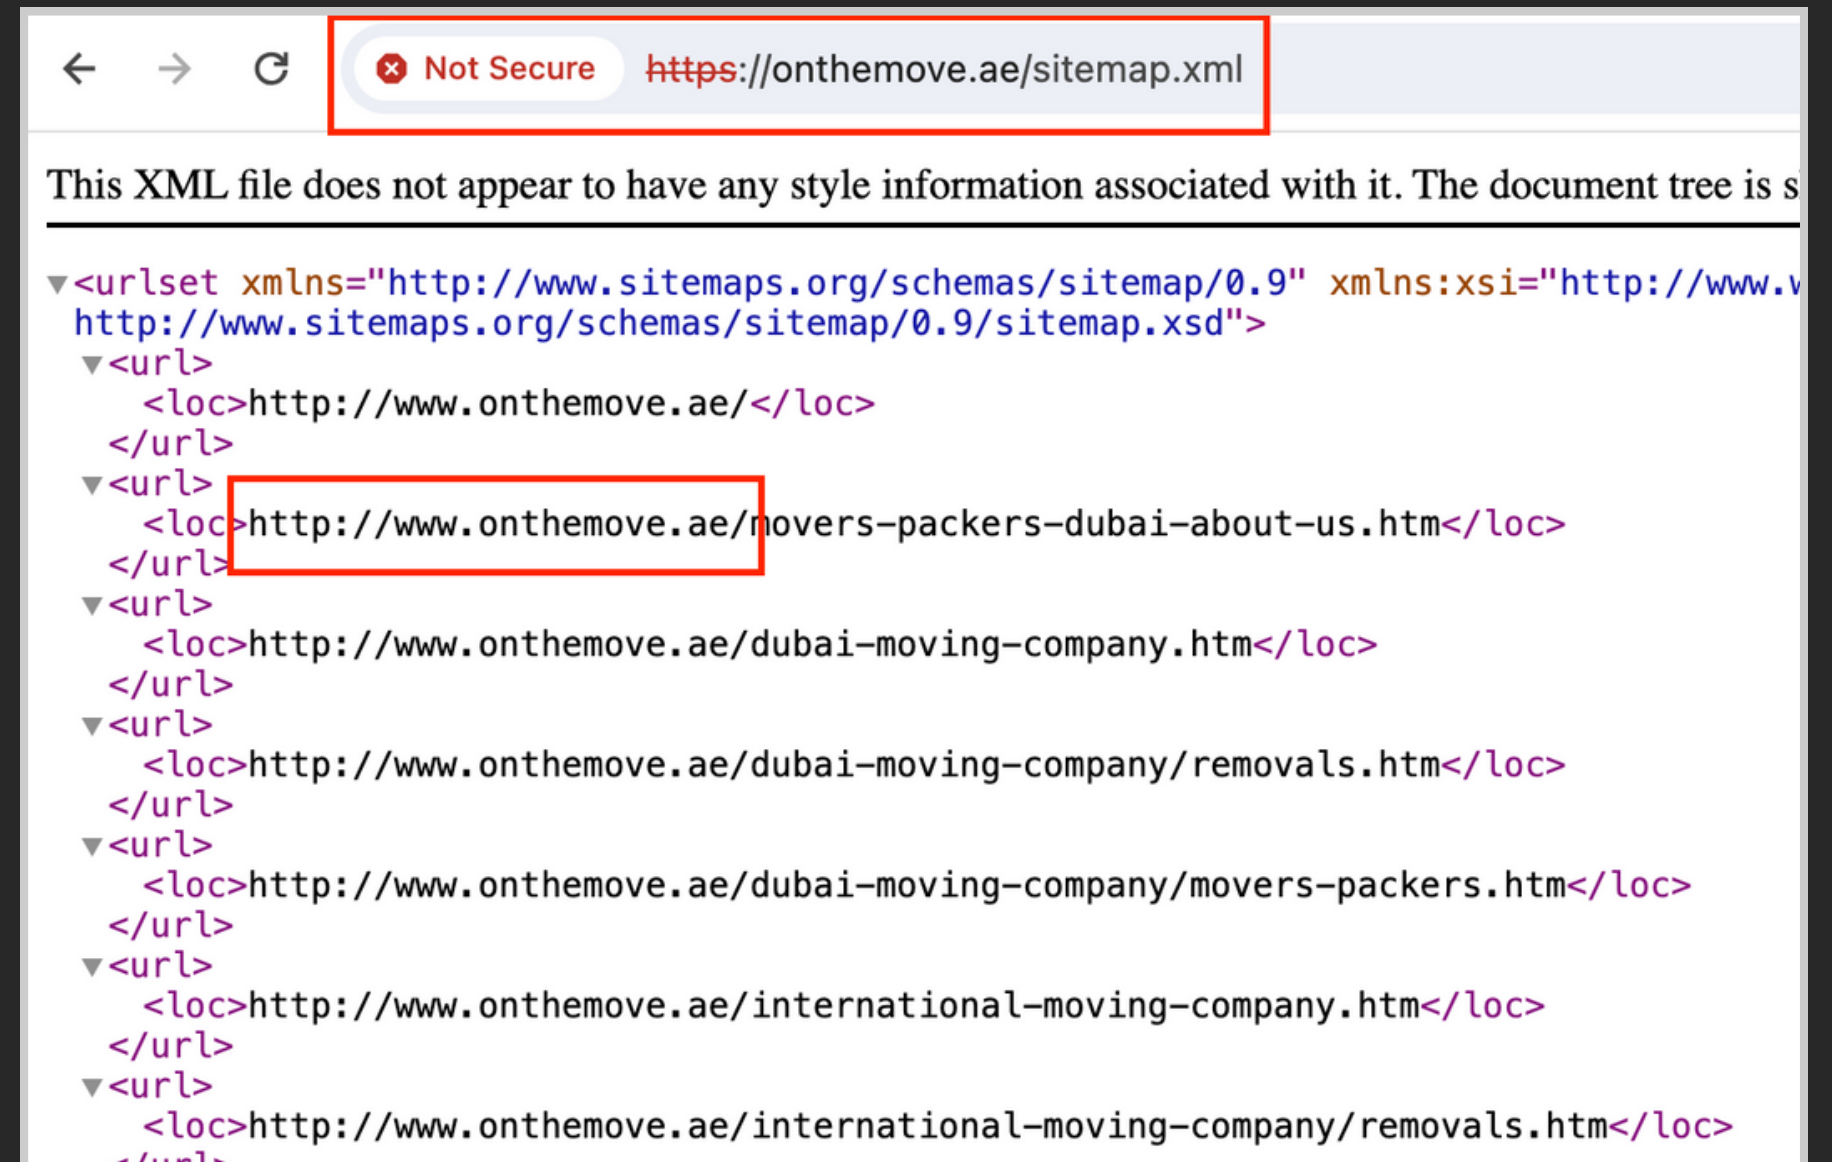

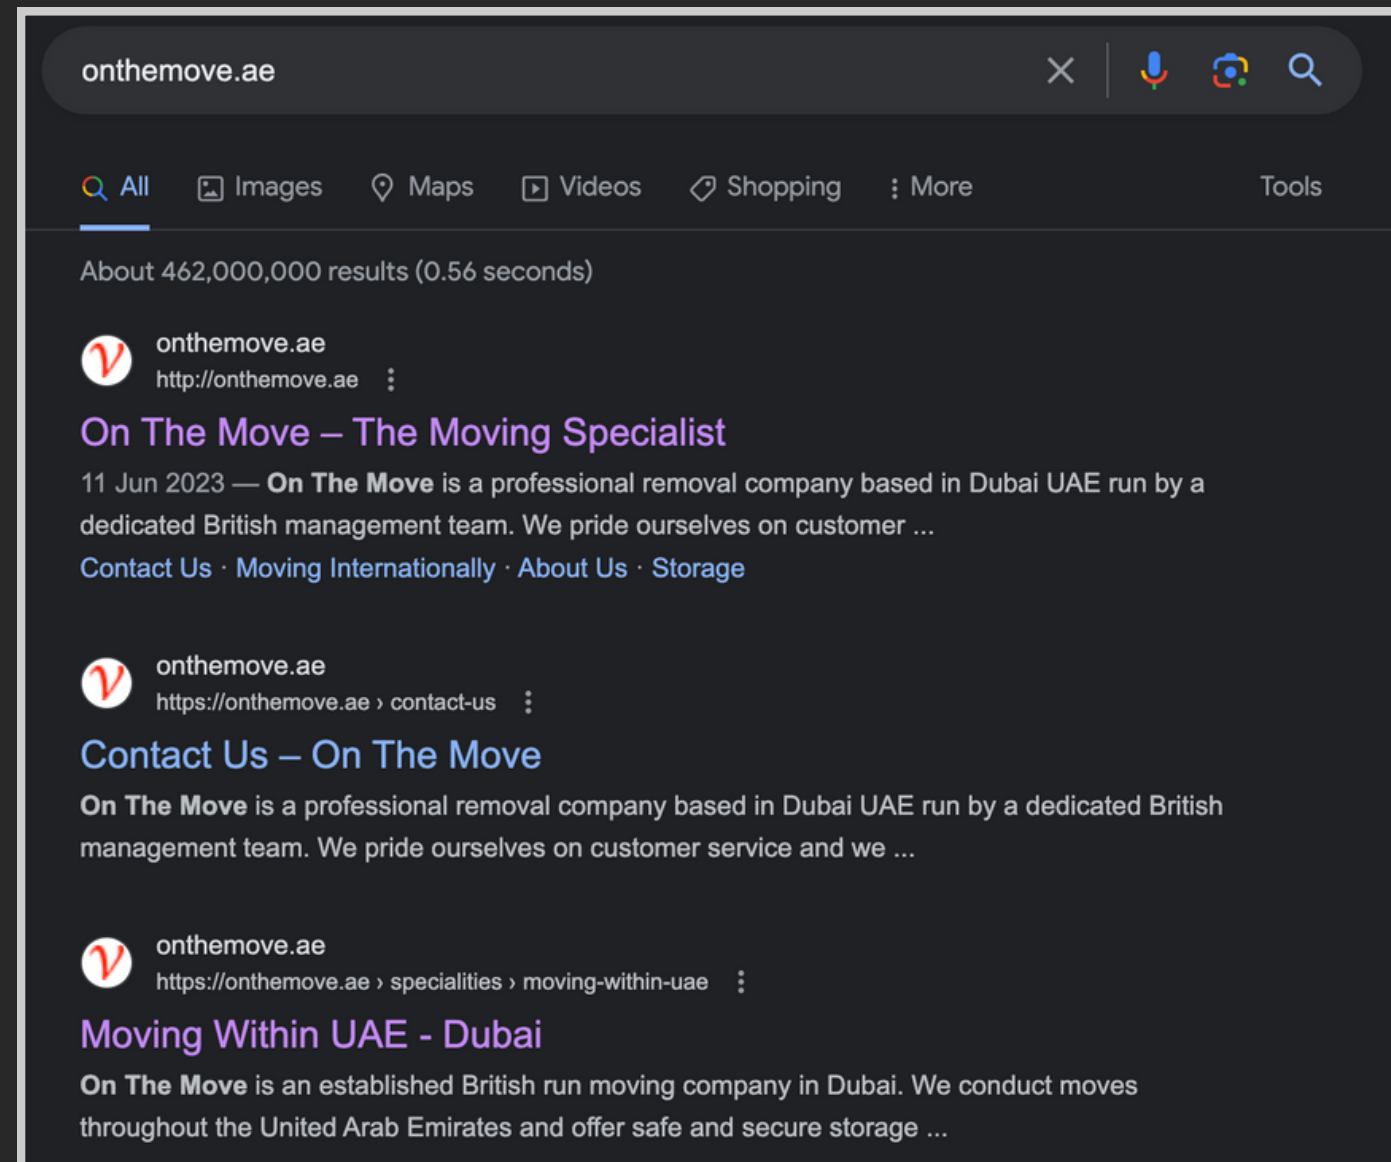

- Your sitemap has outdated records
- All records point to the old domain name
- This can affect your analysis by Google, etc.

## And many more...

- Optimize image sizes
- Add Google Analytics tracking code
- Add online consultant widget

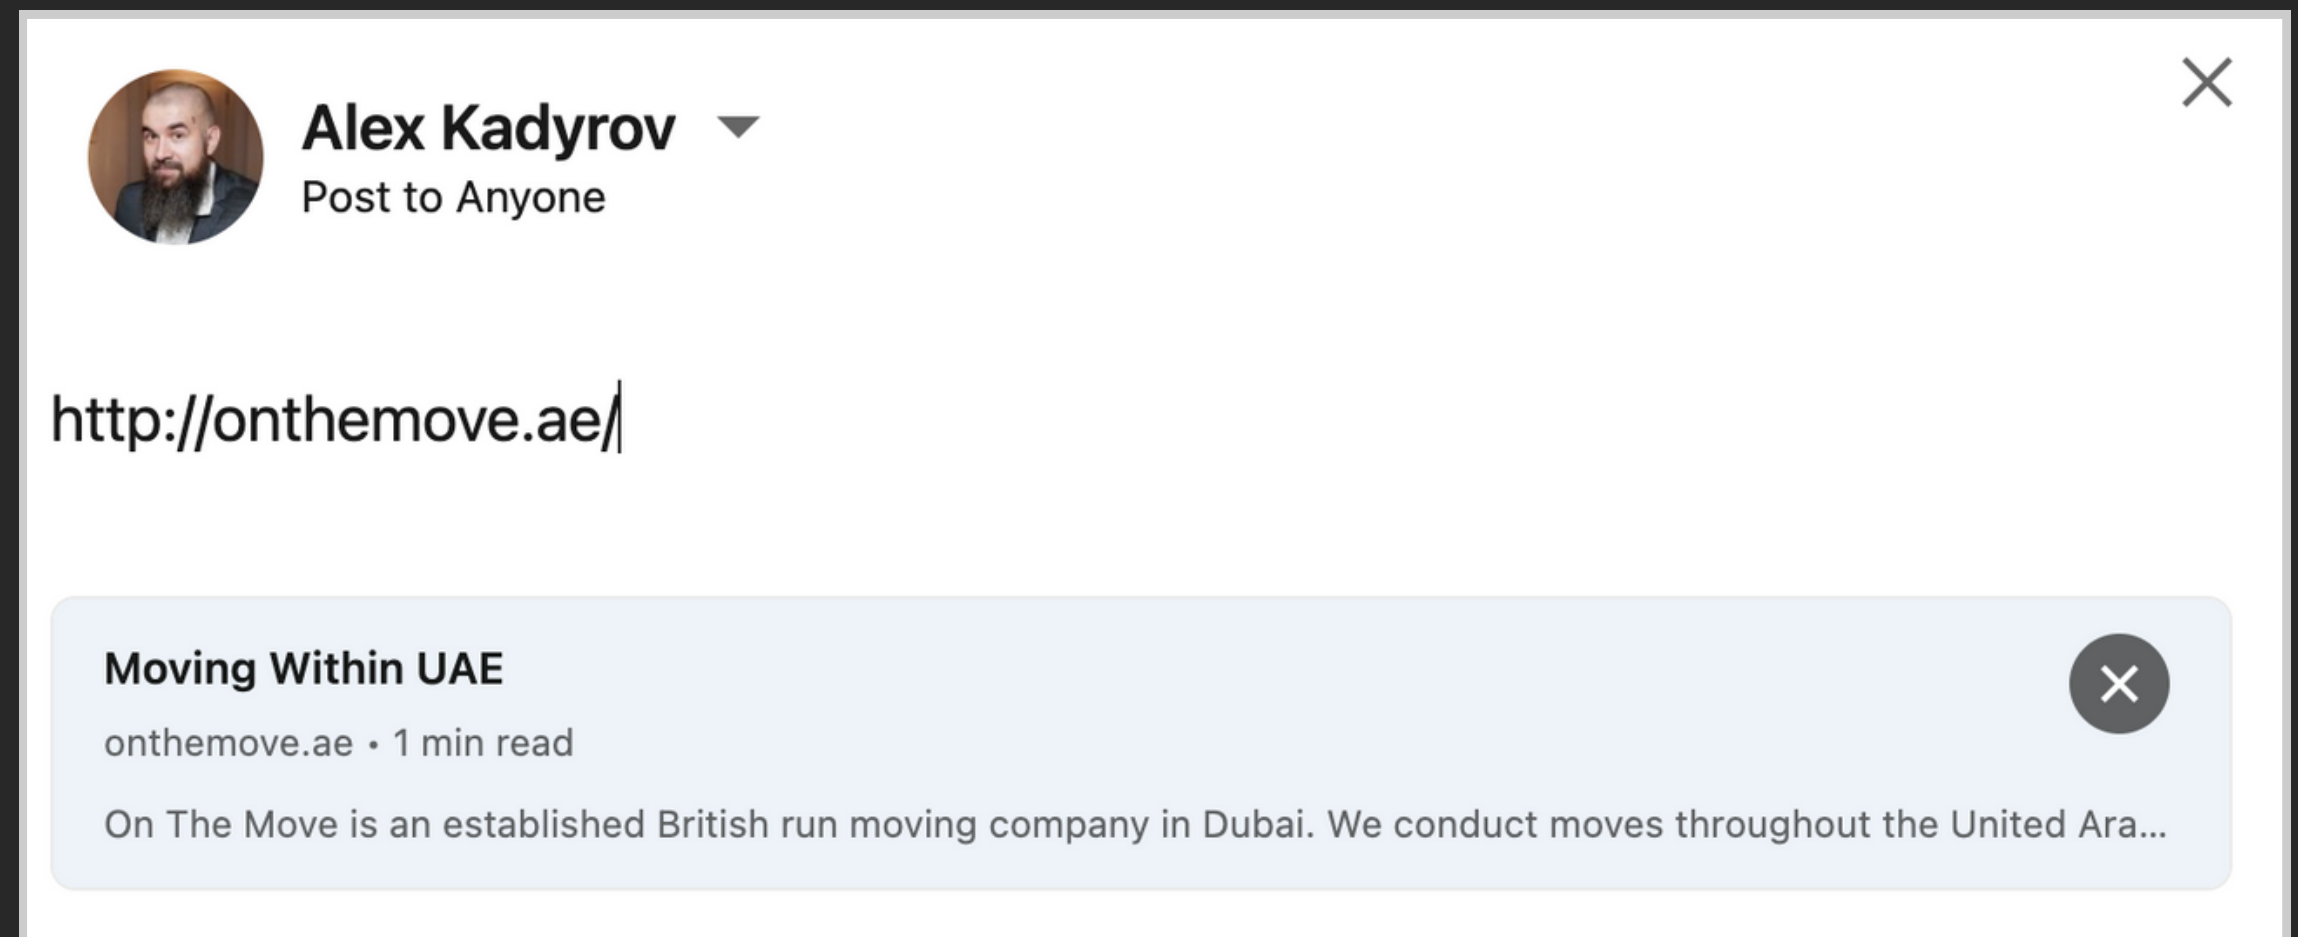

# Your Search Optimization

As your website is not properly configured and not optimized for search engines, you might miss your potential customers

# Your Social Media Cards

Having good social media formatting is crucial for any website.  
Here is how your website is looking on Facebook and LinkedIn:

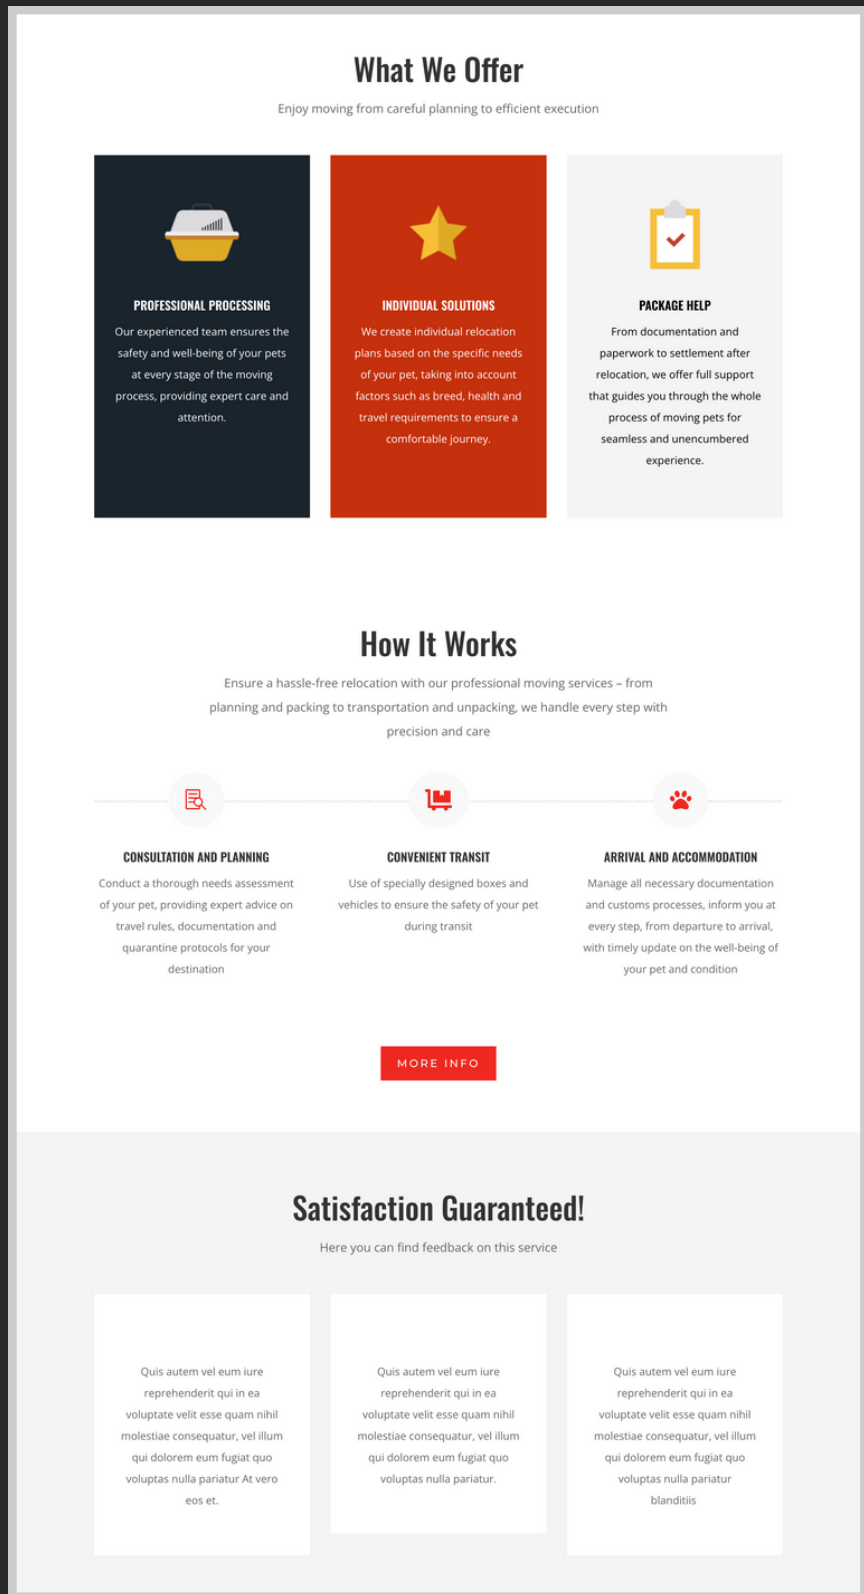

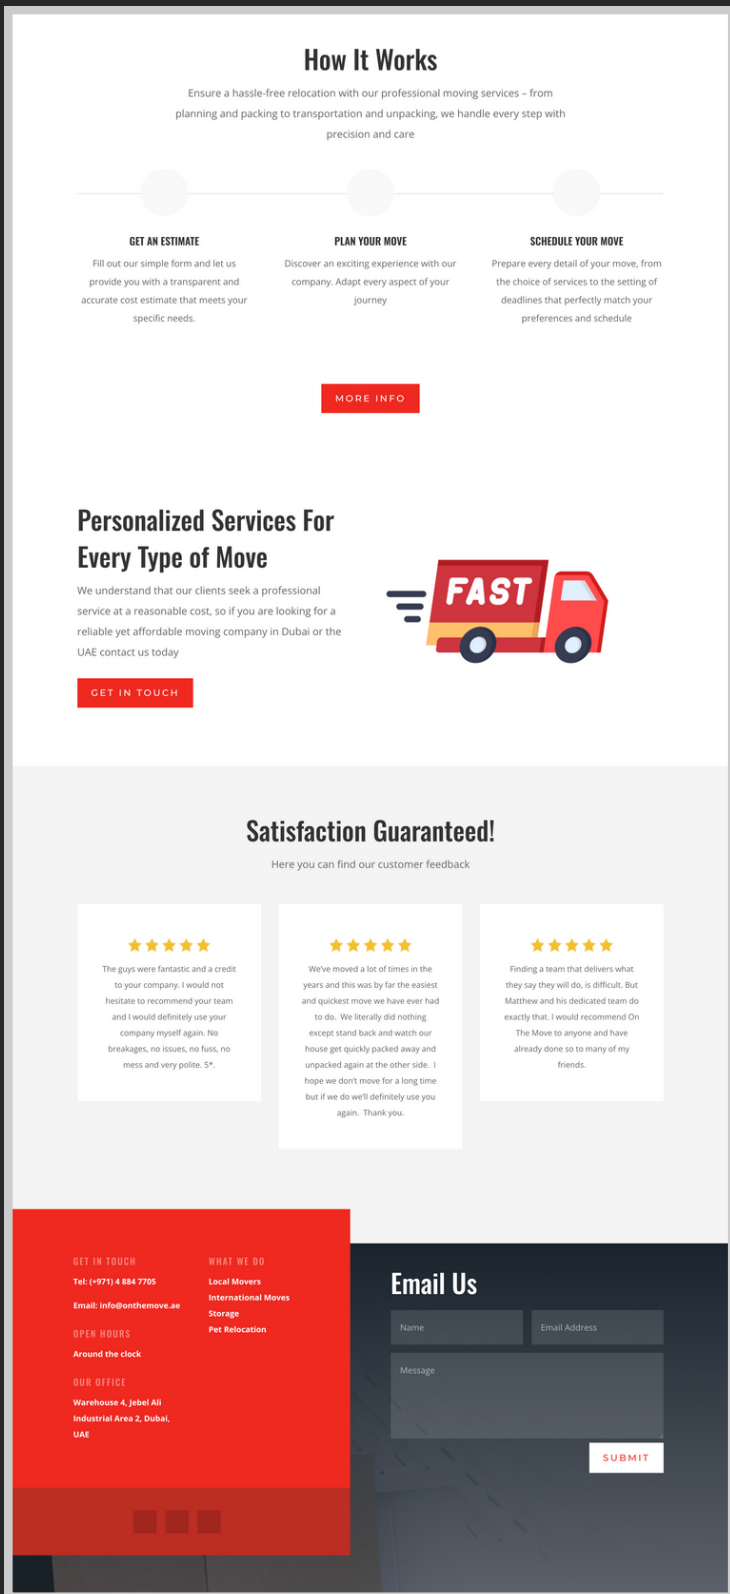

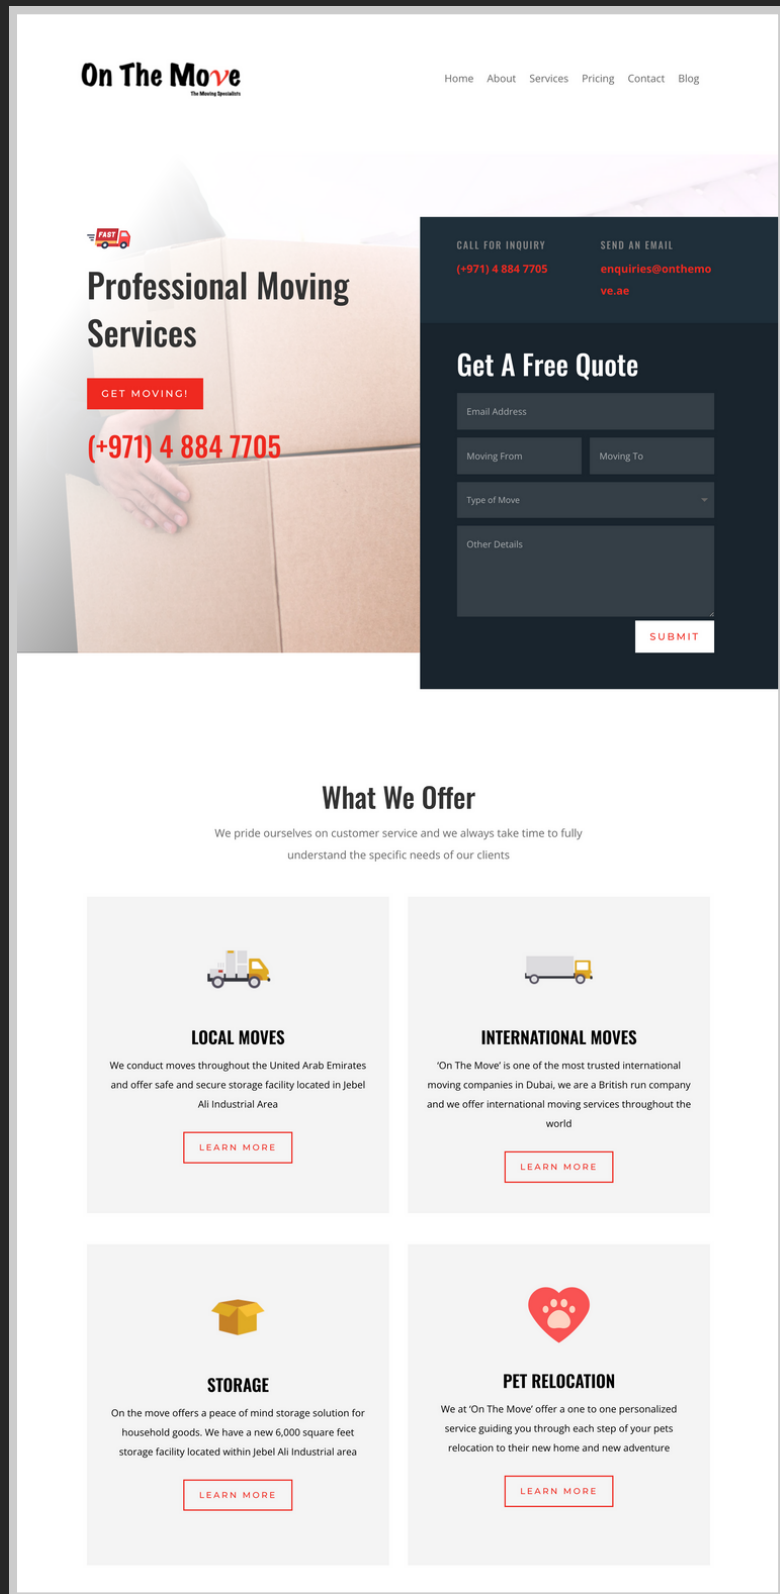

# **What Is Next?**

**We would be happy to launch your brand-new website in a short time. It will be optimized for search engines (SEO), social media platforms, and have user-friendly content. Additionally, we will write five new articles and update your existing content.**

**For a limited time only, get your brand-new website for just 1500 AED!**

# Your Website Is Ready!

# Who We Are?
